

Doubling Time QC Report

=====

File: ../../data/analyze/doubling_time_per_mouse.csv

- Total mice: 690
- Total models: 84

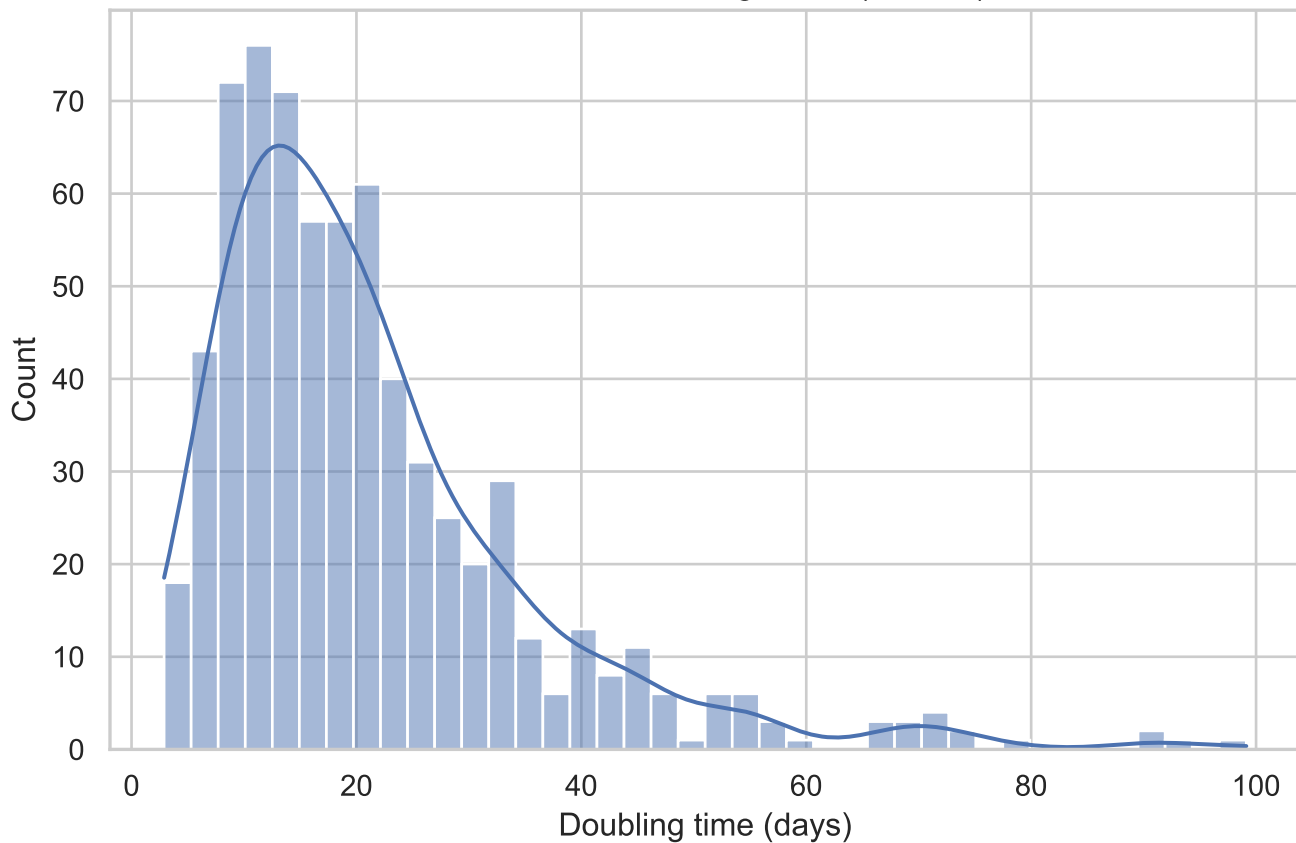

Summary statistics (doubling_time_days):

	doubling_time_days		r2	n_points	max_day_used
count	690.000000	690.000000	690.000000	690.000000	690.000000
mean	21.169640	0.859464	7.592754	30.152174	
std	14.271307	0.125880	2.551804	5.973456	
min	2.896601	0.502678	3.000000	6.000000	
25%	11.520250	0.781914	5.000000	28.000000	
50%	17.703225	0.903184	7.000000	33.000000	
75%	25.646751	0.959798	10.000000	34.000000	
max	99.130258	0.999683	12.000000	35.000000	

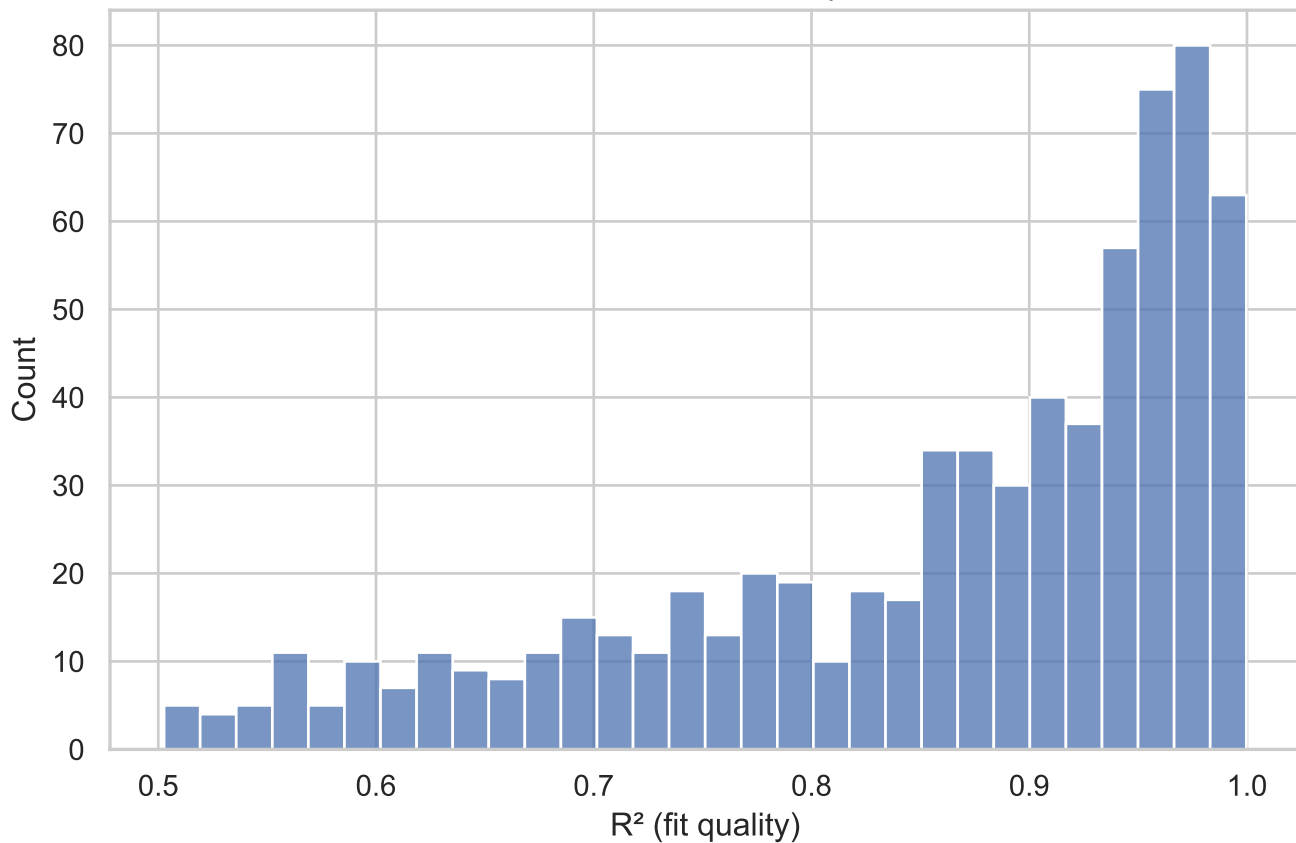

QC Metrics:

- Good exponential fits ($R^2 \geq 0.6$): 94.2%
- Fast-growing tumors (DT < 10 days): 18.7%
- Slow-growing tumors (DT > 50 days): 4.8%

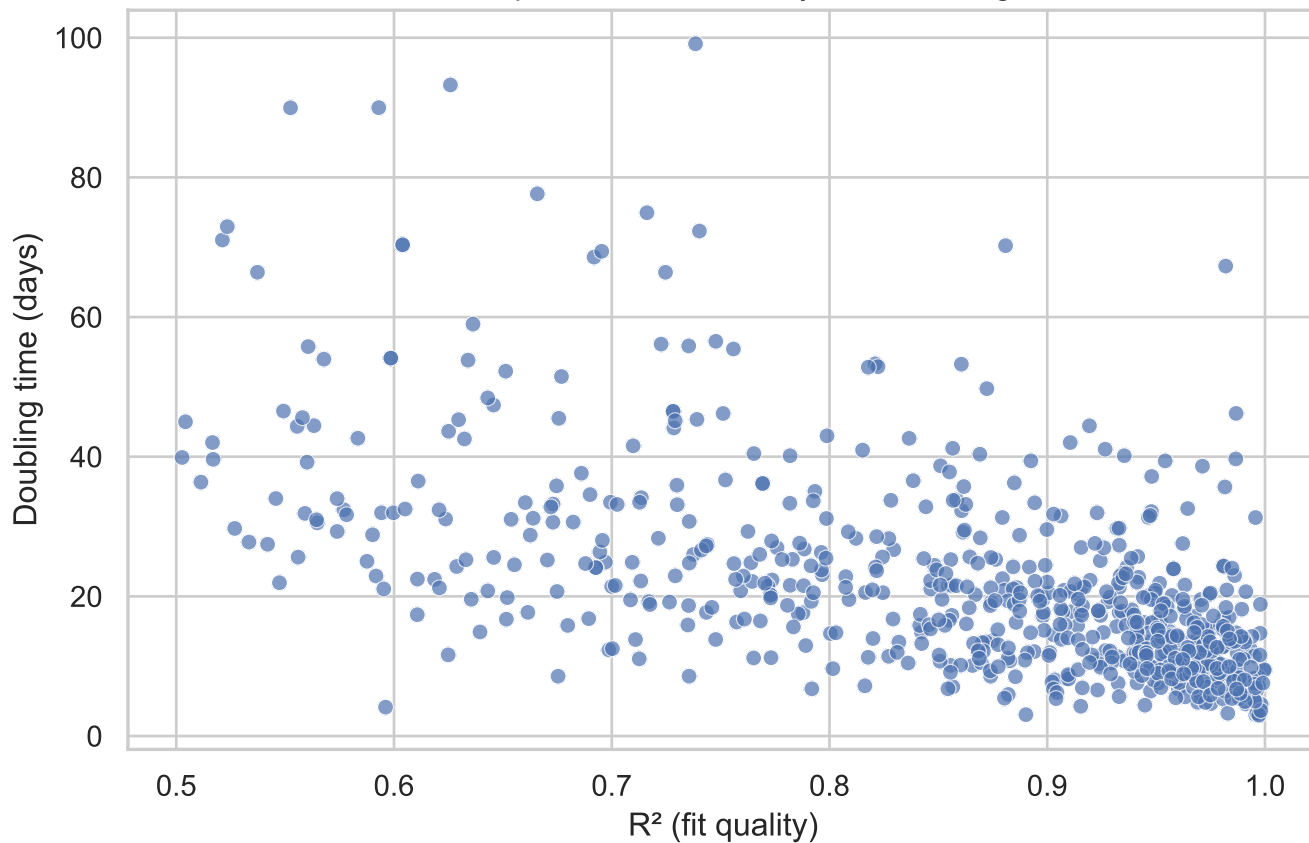

Distribution of Doubling Times (all mice)

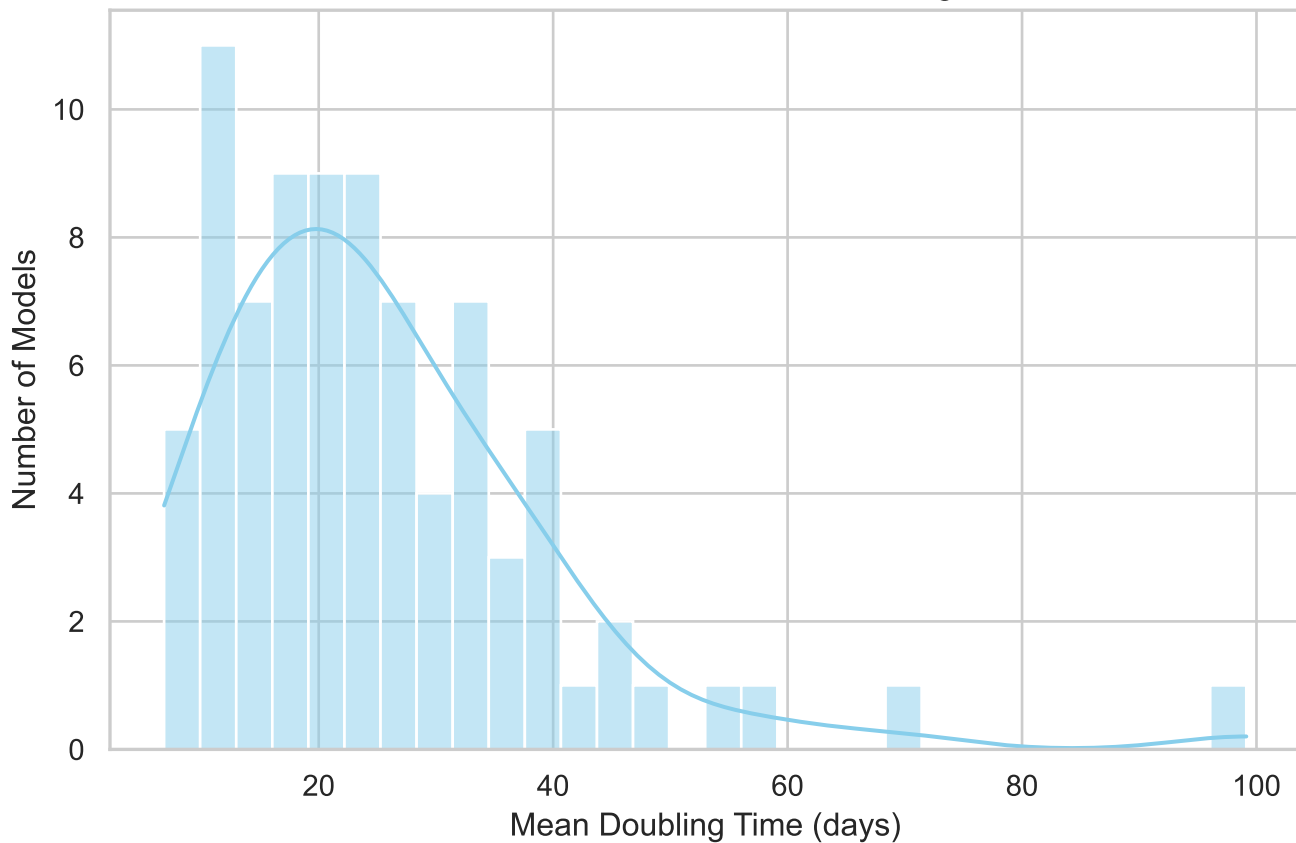

Distribution of R^2 Values for Exponential Fits

Relationship between Fit Quality and Doubling Time

Distribution of Model-level Mean Doubling Times

Variation of Replicate Doubling Times per Model
