

RNA-seq QC Report

=====

Input file: ../../data/analyze/RNAseq_log2tpm_protein_coding_hugo_final.csv

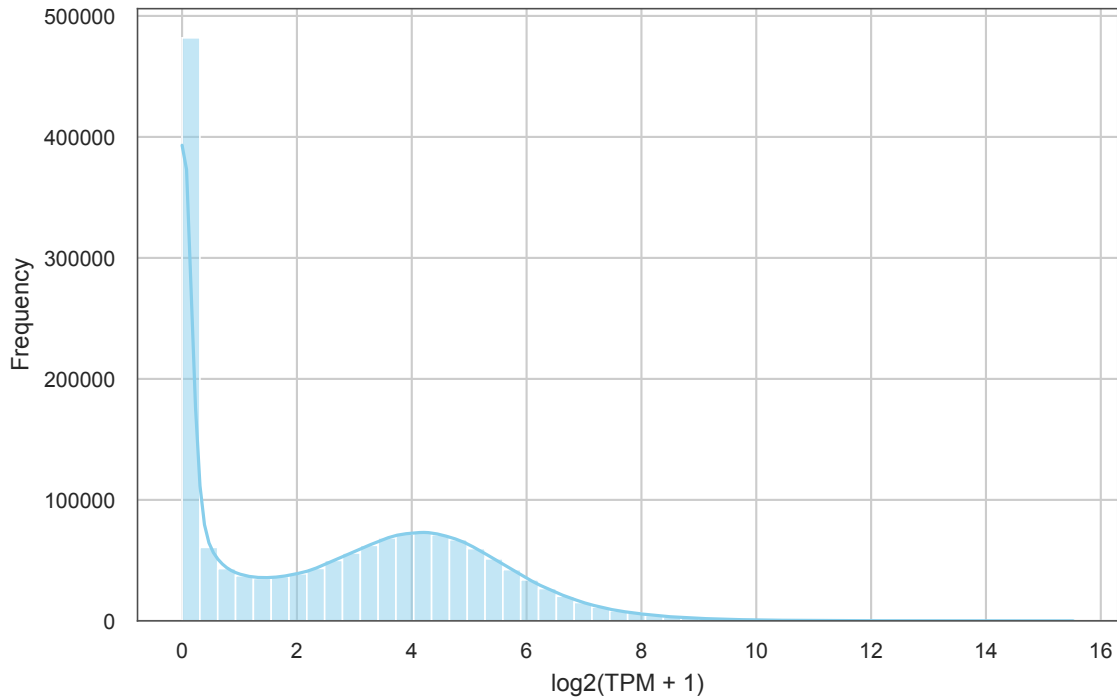

Summary statistics

- Total models: 81.0
- Total genes: 19634.0
- Expression range: 0.00 – 15.52
- Mean expression: 2.63
- Median expression: 2.66

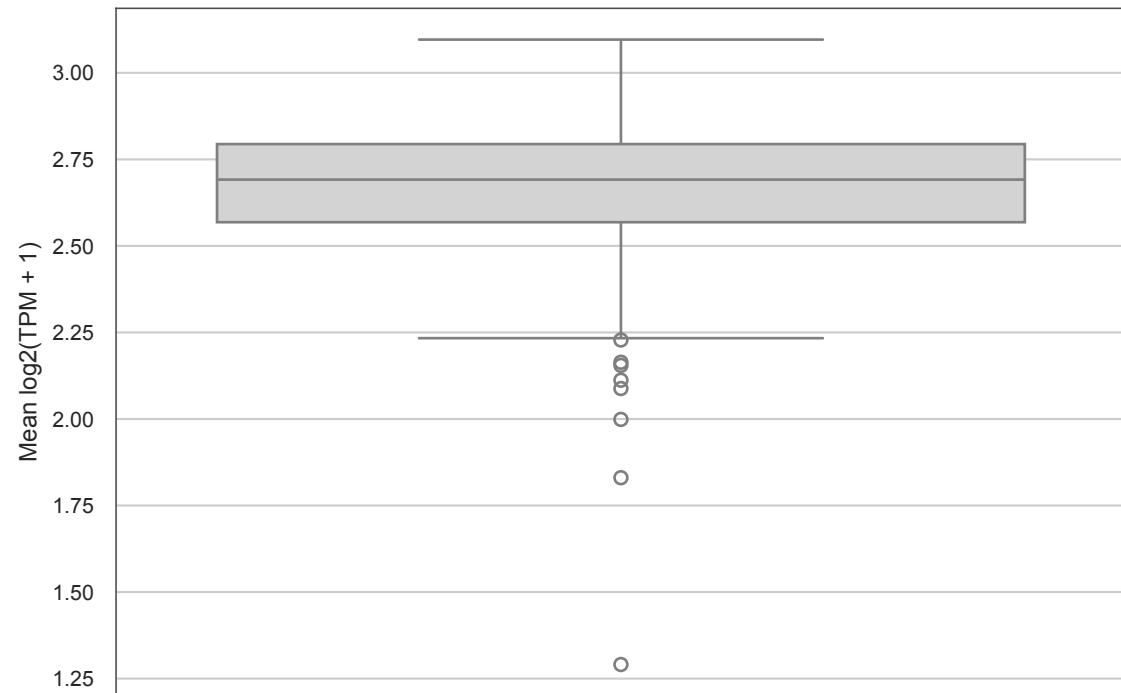

QC objectives

1. Confirm expression value distribution (expected 0–12)
2. Check sample-wise variance (no outliers)
3. Verify mean–variance trend across genes
4. Detect low-quality or atypical models

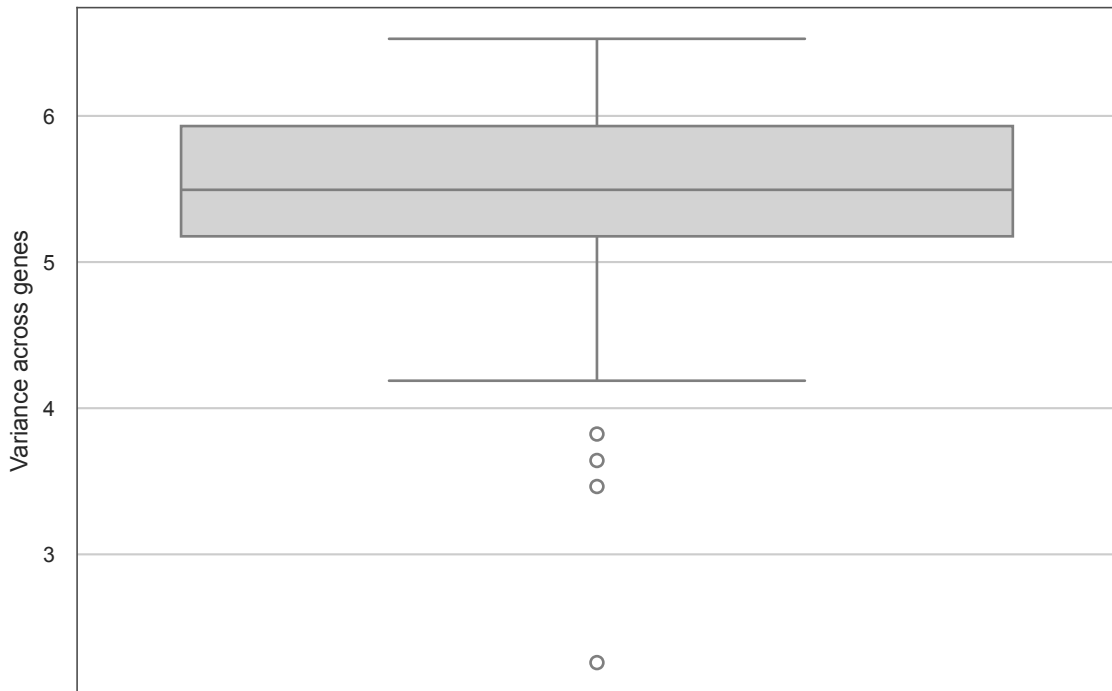

Global distribution of $\log_2(\text{TPM} + 1)$ values

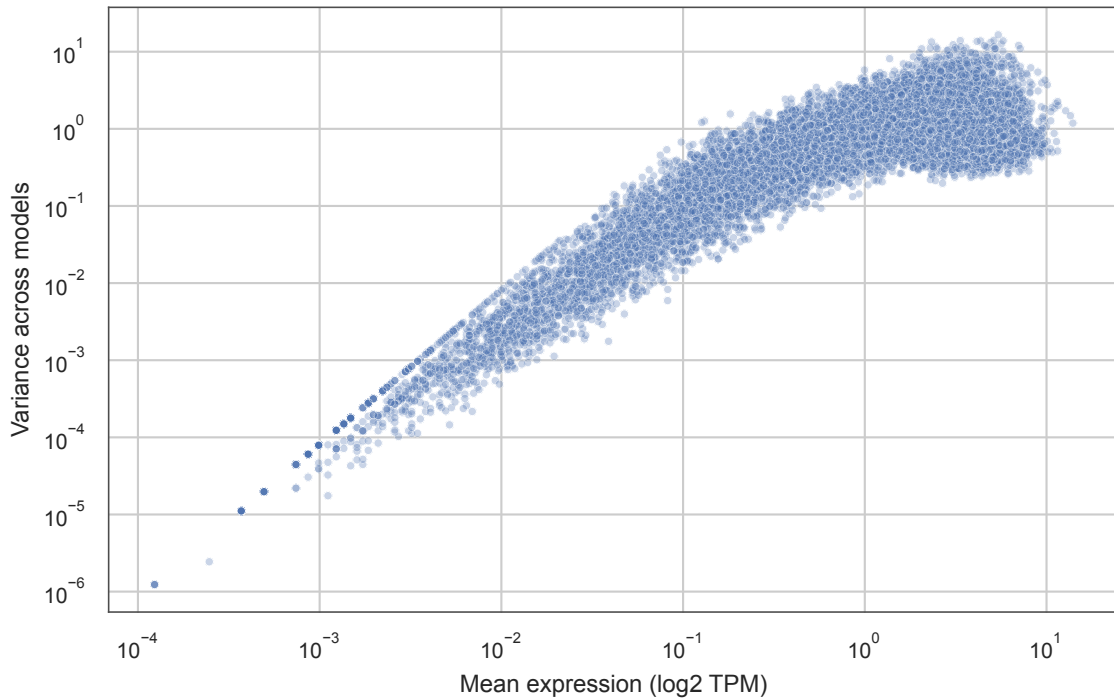

Per-sample mean expression distribution

Per-sample variance (model-level)

Mean–variance relationship across genes

[illegible]
