

RNA-seq Gene Filtering QC Report

Input file: ../../data/analyze/RNAseq_with_doublingrate.csv

Filters applied:

- Variance > 0.01
- Mean expression > 1.0

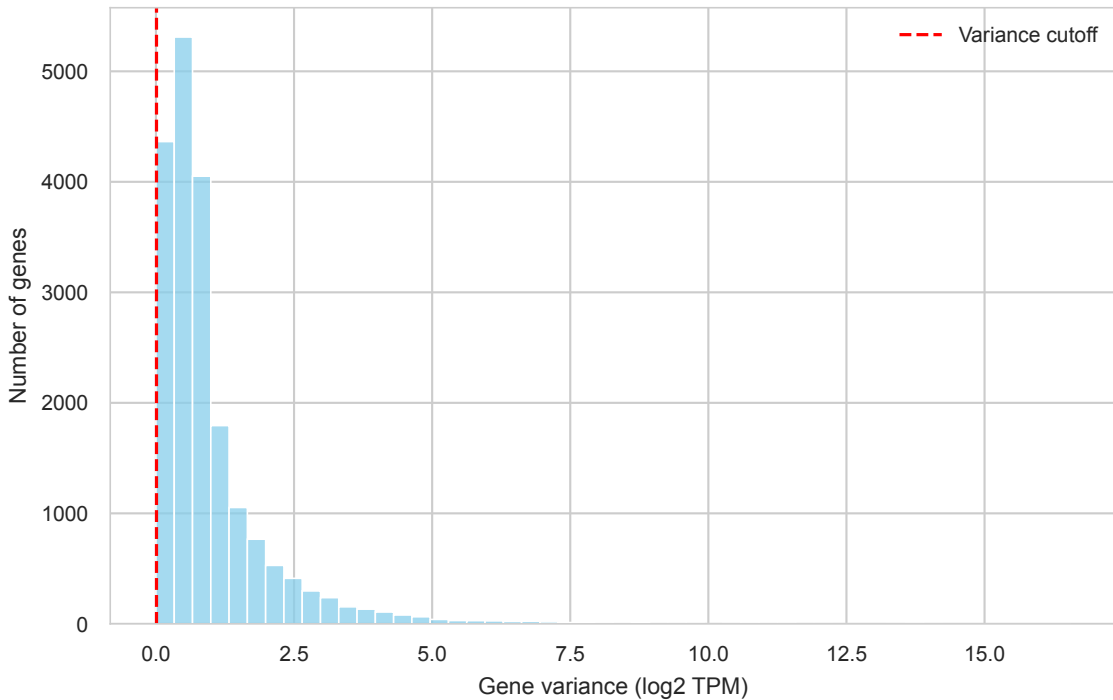

Summary:

- Models: 81
- Genes before filtering: 19634
- Genes retained: 12980
(66.1% of total)

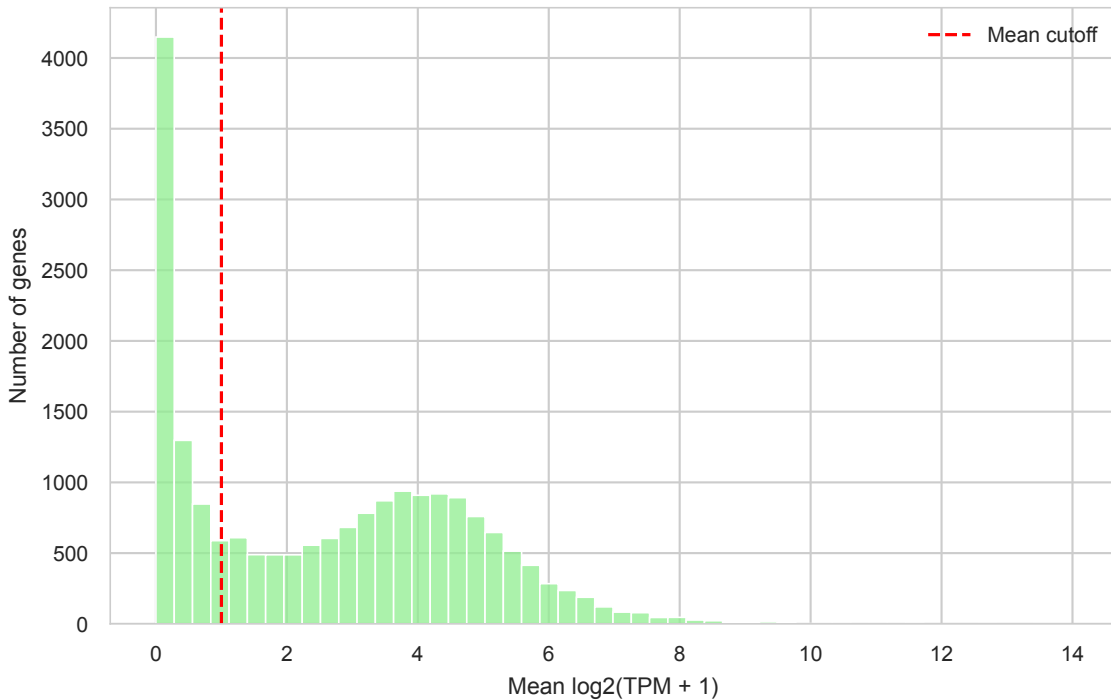

Notes:

- Variance threshold removes near-constant genes.
- Mean expression threshold removes lowly expressed genes.
- Next step: modeling with ElasticNet / RF using final_DT_mean.

Distribution of gene variance

Distribution of gene mean expression

Mean–variance relationship
