

## Doubling Time per Model – Summary Report

=====

Input file: ../../data/analyze/doubling\_time\_per\_model\_final.csv

### Dataset overview

-----

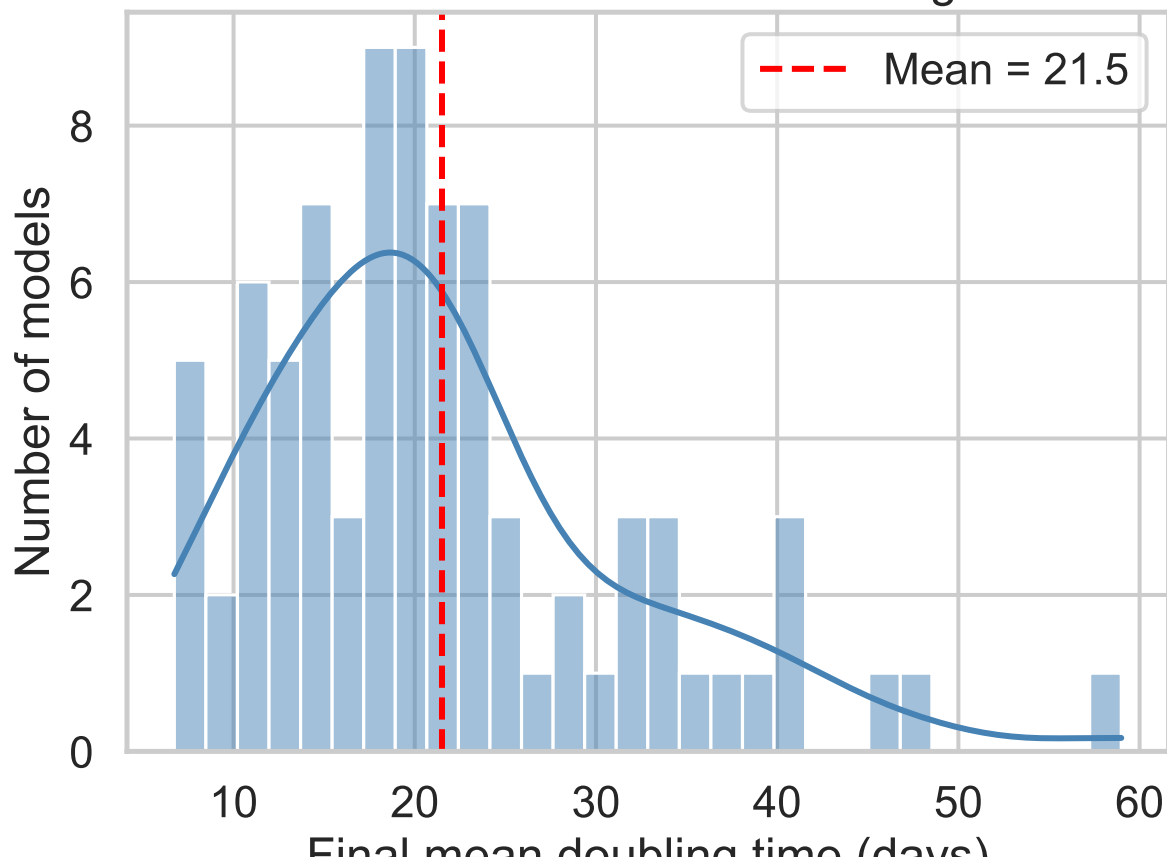

- Total models: 82.0
- Models with  $\geq 2$  replicates: 66.0
- Mean doubling time: 21.5 days
- Median doubling time: 19.3 days
- Mean  $R^2$  (fit quality): 0.874
- Fast models (DT < 10d): 7.0
- Slow models (DT > 40d): 6.0

### Notes:

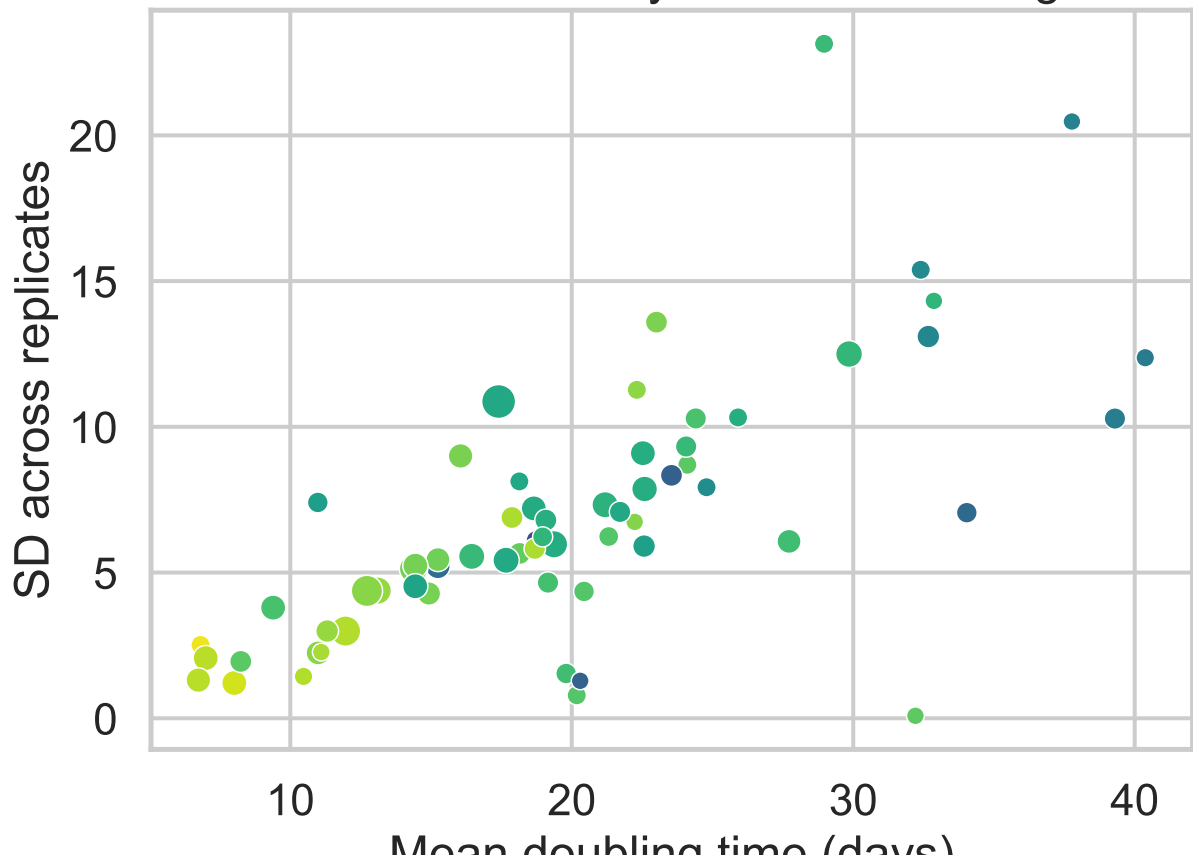

-----

- Each model's final doubling time was derived as the mean across retained replicates after QC filtering.
- Models with only 1 replicate are retained but marked as less reliable.

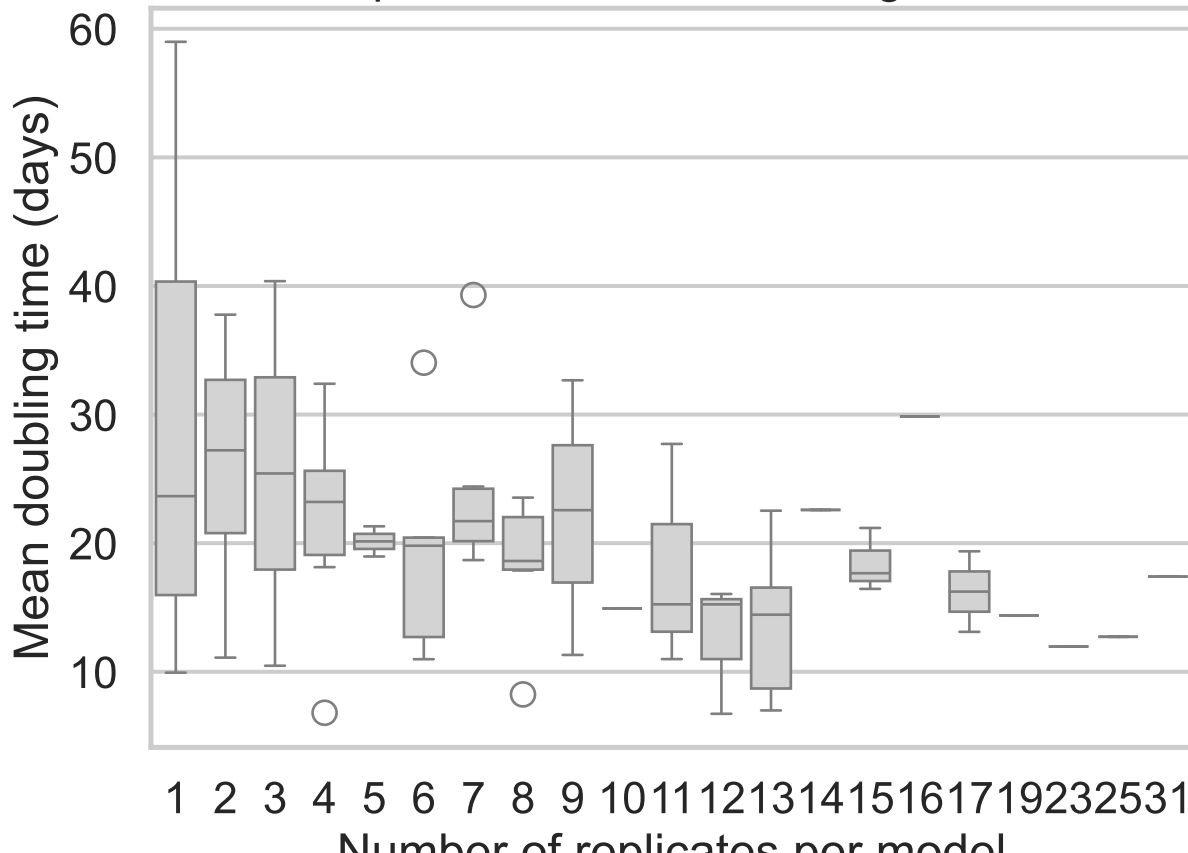

Distribution of model-level doubling times

Within-model variability vs mean doubling time

Effect of replicate count on doubling time estimate

Model-wise doubling times (sorted)
