

Doubling Time per Model – Summary Report

=====

Input file: ../../data/analyze/doubling_time_per_model_final.csv

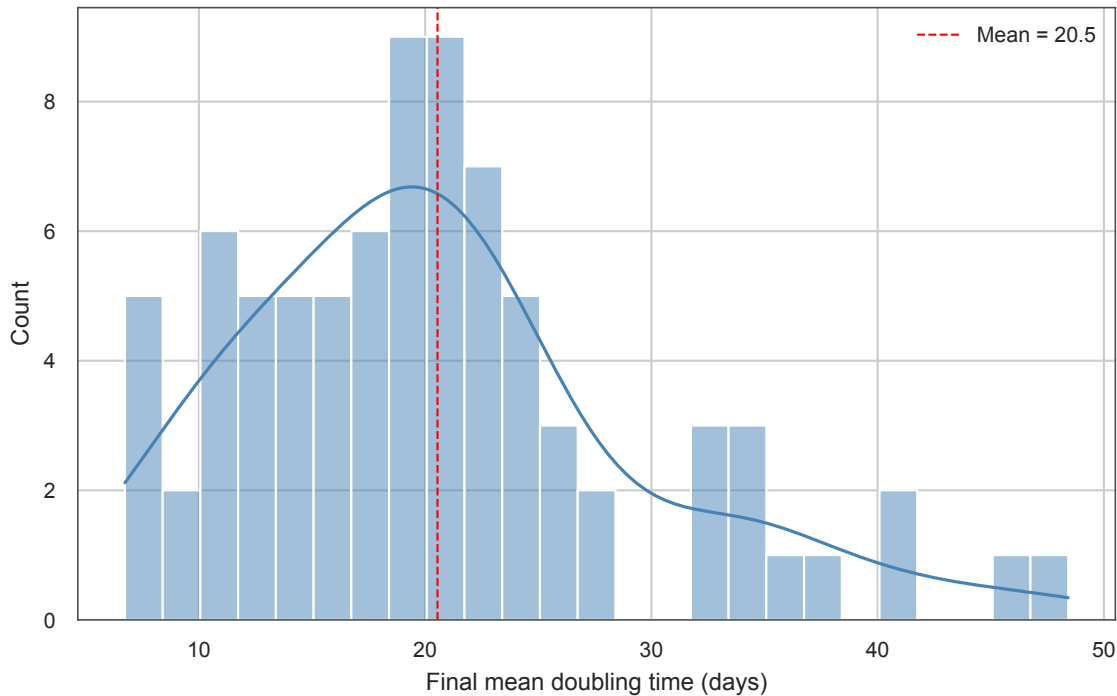

Dataset overview

- Total models: 81.0
- Models with ≥ 2 replicates: 65.0
- Mean doubling time: 20.55 days
- Median doubling time: 19.23 days
- Mean R^2 (fit quality): 0.88
- Fast models (DT < 10d): 7.0
- Slow models (DT > 40d): 4.0

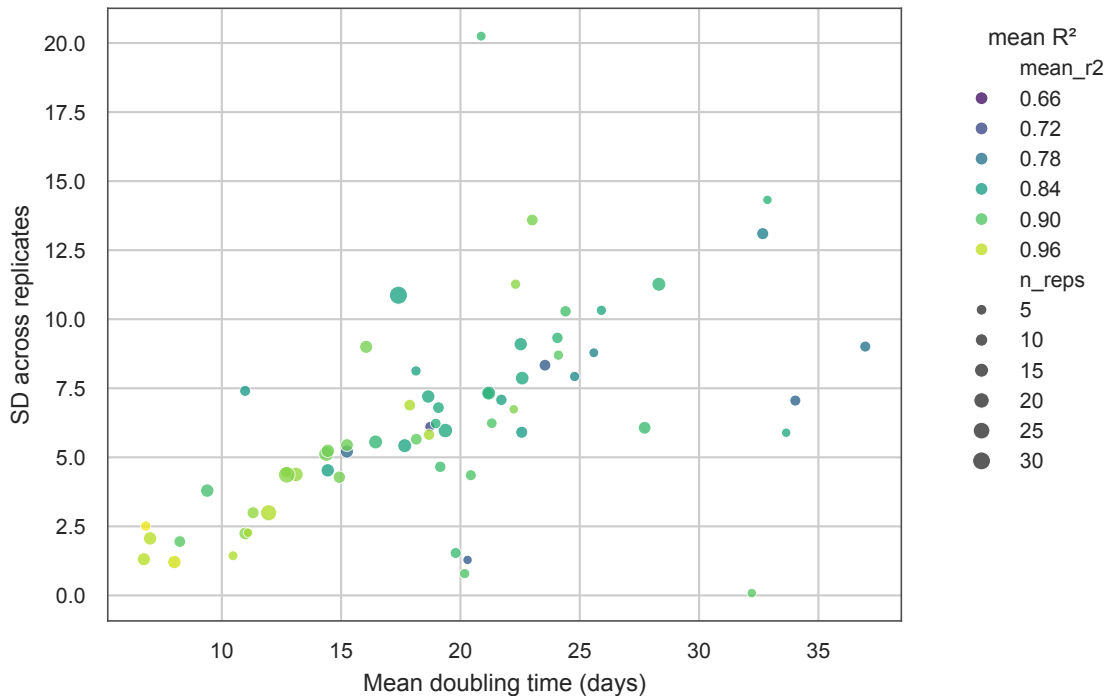

Notes:

- Each model's final doubling time was derived as the mean across retained replicates after QC filtering.
- Models with only 1 replicate are retained but flagged as less reliable.

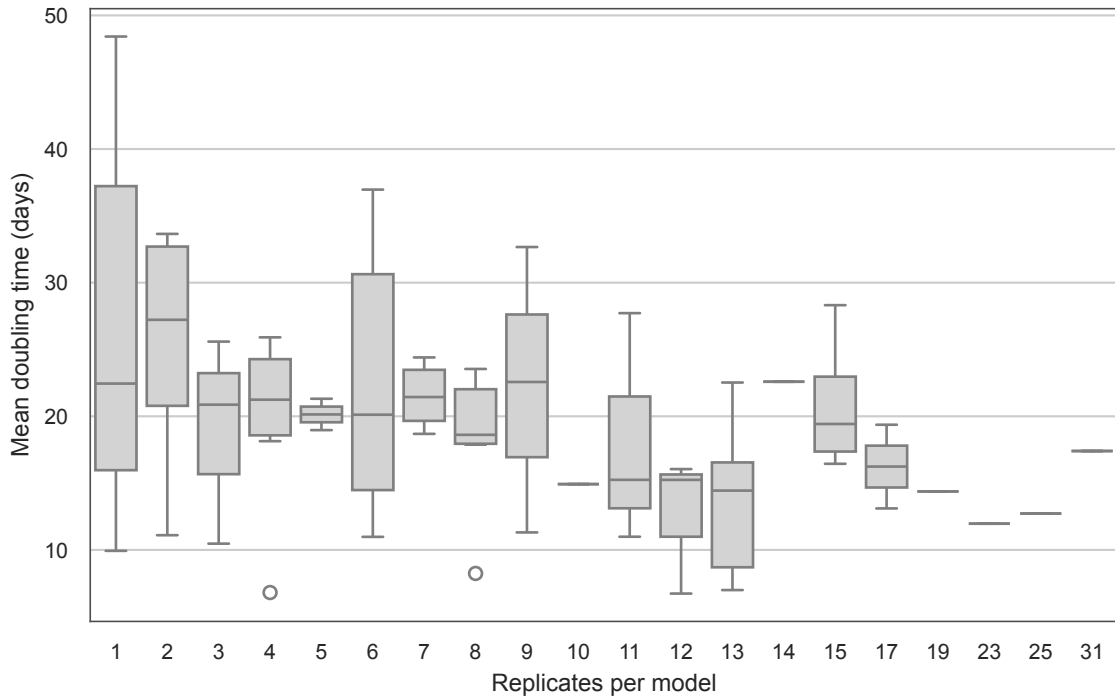

Distribution of model-level doubling times

Within-model variability vs mean doubling time

Effect of replicate count on doubling time

Model-wise doubling times (sorted)
